EXPERIENCE

Senior Software Engineer at Meta

Applied AI

 June 2026 – Present  New York, NY

IG Lead Generation

 March 2025 – June 2026  New York, NY

- Backend Technical Lead for features that optimized the performance of Lead Ads on Instagram which drives over \$8 billion dollars in annual revenue.
- Drove multiple features that further improved the performance of Instant Forms by shortening the conversion journey for end users
- Leveraged AI to further optimize Offsite Lead Ads to bring features that previously only existed for Instant Forms

Gen AI for Instagram Direct Messaging

 March 2024 – March 2025  New York, NY

- Lead Backend Engineer for AI Studio for Instagram Direct Messaging, enabling users to create group chats with AI Characters.
- Designing and implementing key backend components of Imagine for Instagram Direct, allowing users to use Gen AI to generate images for themes, stickers, and in-thread messaging
- Encouraged a culture of learning from our user impacting incidents and ensured we created actionable follow-ups, by starting and moderating our weekly Incident Review.

Community Chats for Facebook Messenger

 February 2023 – March 2024  New York, NY

- Enabled these chats to scale to tens of thousands of users through the implementation and designing of novel backend solutions.

Facebook Integrity

 May 2021 – February 2023  New York, NY

- Tech Lead and lead backend engineer for the Control Panel, allowing users to adjust their News Feed content based on their preferences.
- Building big data pipelines to measure the ranking efficacy of these controls by leveraging **Python, Spark, Presto, Hive**.

Software Engineer II at Microsoft

Azure Compute Allocator

 August 2017 – March 2021  Redmond, WA

- Leveraged tools such as **.Net, C#, Service Fabric and Kafka** to better pack VMs on hardware in order to improve the overall capacity of the fleet in a fast and reliable way.

Software Engineering Intern at Google

Apps and Product Infrastructure

 May 2016 – August 2016  Mountain View, CA

- Developed internal UX tools, that enabled engineers to easily parse data on App Deeplinking.
